Informatics is an exciting interdisciplinary field that focuses on analyzing and managing data—and making that data secure and actionable for users within a specific field, such as health or sports.

The Informatics Master’s degree program from the San José State University School of Information is ideal for students with technical and non-technical backgrounds who are interested in exploring connections between people and technology.

While focusing on human/computer interaction and the needs of the end user, students will take 18 units of course work that will provide the foundation and skills needed to:

- Manage and secure electronic records
- Set up secure digital assets management (DAM) systems
- Manage projects

Students will apply the Informatics skill set in one of three contexts with an additional 9 units focused on end users within a specific domain, such as Health (including Telehealth) or Sports, or with a focus on Cybersecurity and Privacy.

**Program Snapshot**

- 30 total units
- Can be completed in as little as one year

**Potential Careers**

Job titles for graduates with a Master’s degree in Informatics include:

- Medical Records Manager
- Information Architect
- Clinical Data Analyst
- Web Application Developer
- User Experience Architect
- Sports Analytics Researcher

**Did you know?**

Employment of medical and health services managers is projected to grow 20 percent from 2016 to 2026, much faster than the average for all occupations.
